DESCRIPTION

The C-Vision is a superbly engineered, dual functions video and communications systems for both inshore and offshore diving operations. The system allows both video and voice communication to be easily monitored and recorded in one easy to operate unit.

The C-Vision system is a portable surface control unit, which incorporates video and variable light controls for 2 divers and communications for 3 divers and a tender, all operated through a waterproof keyboard built into a rugged case.

The C-Vision comes complete with a 15.6" daytime viewing screen which offers excellent images of underwater operations.

Advanced controls include video overlay and positioning, data outputs (LAN, AUX, USB & EXT AV OUT) and volume controls.

The C-Vision provides 4th generation processing power and utilises the latest technology; C-Tecnics are committed to keeping the lifecycle of the system to an absolute maximum. The components are carefully selected to minimise heat build-up, which allows the C-Vision SCU to operate in a range of temperatures and humid climates.

Â

FEATURES

Multiple Cameras: Operate 2 sets of Underwater Cameras & Lights

Viewing Options: Full/Split Screen viewing of Camera Images

Overlay: Adjustable text screen over-lay

Recording Time: From 150 hours Video & Communications Recording

Communications: 3 Diver & Tender Communications

Portable: Portable & Rugged, weighing only 12.8KG

Anti-glare Screen: Anti-glare and high brightness screen

Harsh Environment design

SPECIFICATION

Software: The C-Vision software is a uniquely developed software package designed with diving operations and video compression in mind. The software is run in conjunction with Microsoft Windows 7 and is capable of full or split screen viewing. Text overlay is adjustable to meet your need and includes diver name, location and time stamps, while GPS and depth are available as optional add-ons. File compression is adjustable which allows between 150 hours to 3000 hours of video and communication recording onto the internal 500GB hard drive.

Communication System: The communications in the C-Vision system are based on the same electronics found in the C-Phone, with optical isolation ensuring no interference and degradation in the quality of the audio signal. The SCU has a built-in charger for communications so in the event of mains failure the communications will have back-up power for up to 30 hours.

Video System Cable: The C-Vision SCU and cable remove the complication of clustered wiring associated with recording diving operations. The C-Vision cable incorporates all functions including video, communications, depth recording, lamp power and control.
