DESCRIPTION

In the event of a submarine becoming in distress or disabled urgent critical support needs to be made available through the use of a number of systems and methods. SMPs innovative Submarine Rescue Systems represent the pinnacle of subsea engineering, providing a crucial lifeline to submariners in emergency situations. From surface supporting DISSUB Ventilation, Free Accent Recovery and Recompression, Transfer Under Pressure Decompression Arrays (TUP) to subsea Remotely Operated Vehicles (ROV), free swimming Rescue Vehicles (SRV) and Atmospheric Diving (ADS), our specialist equipment represents a critical aspect of submarine operational safety. SMP's innovative submarine rescue systems represent the pinnacle of subsea engineering, providing a lifeline to submariners in emergencies. From emergency ventilation and decompression equipment to submersibles and free swimming rescue vehicles, our specialist equipment represents a critical aspect of operational submarine safety. Our complete solutions incorporate ventilation systems and decompression chamber arrays with submarine rescue vehicles and supporting equipment.

FEATURES

Major Components of our Submarine Rescue System include: -

- Submarine Emergency Ventilation and Decompression System (SEVDS)
- Control Container
- Machinery Container
- Umbilical Winch Package
- Subsea Control Module (SCM)
- 2 x 16 Cylinder HP Air Quads
- Atmospheric Submersibles
- Remote Operated Vehicles (ROV)

SPECIFICATION

All our Submarine Rescue Systems are built bespoke to user specifications, we provide full consultancy. Please contact us to discuss your requirements
